Agri-tech Weather Monitoring

Station configurations:

- The Vantage Pro range of stations offers the end user a number of configurations depending on specific requirements
- Standard Vantage Pro stations measure temperature and humidity, wind speed, direction and rainfall
- Solar radiation and ultra violet sensors can be added to the ISS
- Additional "mini" stations measuring temperature only or temperature and humidity can be added to the system
- Soil moisture and soil temperature together with leaf wetness is measured from the Soil and Leaf station
- All transmitter stations can "talk" to the Central receiver / console
- With Vantage Connect systems stations "talk" to the Connect unit

Software:

Weather Station software:

- The Weatherlink software enables data transfer from the station data logger to the PC - suitable for Vantage Vue & Vantage Pro
- Weather data can be displayed in "real-time" being updated every 3 seconds
- Weather data can be viewed in graphic format or report mode
- Add the ag turf module and create a number of agronomic reports for key decision making
- Publish the weather data to your own web site
- With the IP version of Weatherlink connect the data logger to your broadband router to view data instantly across the web - download your data anywhere via the web
- Above feature standard on the Vantage Connect systems

Support:

Weather station installation and support Service:

- Agri-tech will help in determining the correct specification of weather station to match the needs of the end user
- Agri-tech offers an installation and training service to ensure that the station is set up correctly and fully functional
- After your purchase Agri-tech can provide ongoing product support including an annual service
